**Certificate Course**

**Teaching aids for school going children**

**2023-24**

**Introduction** -Common examples include timers, flip charts, world globes and flashcards. Teaching aids are usually not subject-specific (as props are) – a timer for example can be used in any subject.

**Types of teaching aids**

**Two are the different types of teaching aids that we will discuss here.**

- **Visual aids.** Teaching aids that include learning through a visual presentation are called visual aids
- **Audio aids.** This teaching aid targets to improve the listening and communication skills of the students

**Audio-Visual Aids. 1. Visual Aids**

Teaching aids which include learning through visual representation is called visual aids. Visual aids are the kind of material that we can see with our eyes. It is the most important teaching aid that teachers always use in their teaching-learning process everyday like book, blackboard, chalk, duster, indicator, picture, map, graphs, charts, posters, bulletin boards, museums, projectors and also important visual aids.

- **Ground substance:** The ground substance is the substance that the student can see and touch. The student inspects and examines by touching and observing matter, which develops the students' senses, as well as the development of his thinking, understanding and observing power.
- **Model:** When the actual substance cannot be brought into the classroom or its size is so large or it is not available then teachers prepare its sample or model which is shown in the classroom so that the student can easily be explained.
- **Image:** Pictures affect students very much. Students are lost in reality by seeing pictures, so teachers also present any story or science or any other subject related picture to the students so that they can be shown and

explained. The things taught through the picture can be remembered by the students for a long time, as well as the pictures can be easily shown in the classroom.

- **Map:** We use the map only when we have to teach the students about historical events and geographical elements or places. While using the map, teachers should take care of some points such as names, titles, directions and signs etc. should be written on it.
- **Sketch:** We need a drawing only when we do not have any real substance or model or map. In such conditions, we show students by drawing a drawing or sketch on a blackboard or on a whiteboard, like making a map of India, showing any state etc.
- **Graph:** A teacher uses graphs only when he has to show any increasing or decreasing pattern. A graph is used in many subjects such as geography, history, mathematics, science, or also to explain climate. And graphs are used to give information about population etc. as well. Also, the graph is most commonly used in teaching mathematics and science.
- **Chart:** The chart is used in Hindi, English, Geography, History, Economics, Civics, Mathematics and Science. For example, to show various forms of nouns in grammar in English or Hindi.
- **Bulletin board:** A bulletin board is a board where students display pictures, villages, figures, articles or essential information in relation to the country's political, economic and social problems. Bulletin boards continuously increase the knowledge of the students.
- **Museum:** The museum is also an important tool of education to increase the knowledge of the students in which all the objects are kept in one place, making the text more interesting and alive with these objects. The museum collects items that are very helpful in subjects like geography, history, mathematics, science.
- **Projector:** Projectors play the most important role among the most used tools in the modern education system. Teaching-learning is made more simple and interesting through projectors. Through the projector, the students get a different kind of enjoyment and memory, development of observational power, curiosity etc.
- **Slides and Films:** Slides and film are used as teaching aids and a projector is used for this. Slides of pictures or film strips can be shown by the projector in

a sequence to give students knowledge.

- **Globe:** With the help of the globe, children are shown the boundaries of continent, ocean, river, mountain. In the topic of geography, the globe is used for the most part, to tell students about the shape of the earth, northern and southern hemisphere, latitude and longitude lines.
